DYNAMICS THROUGH RESISTANCE

About us

DIE KLASSIKER

Drahtgewickelte Rohrfestwiderstände 10 bis 6000 Watt

THE ORIGINAL ONES

Wirewound tubular fixed resistors 10 up to 6000 Watt

DIE FLEXIBLEN

Zementierte Drahtdrehwiderstände 16 bis 1500 Watt

THE FLEXIBLE ONES

Cement coated wirewound variable resistors 16 up to 1500 Watt

DIE INNOVATIVEN

Drahtgewickelte Flachwiderstände, auch gekapselt und in wassergekühlter Ausführung 5 bis 40000 Watt

THE INNOVATIVE ONES

Wirewound flat resistors, also enclosed and watercooled 5 up to 40000 Watt

DIE BELASTBAREN Last- und Prüfwiderstände 0,01 bis 250 Kilowatt **THE LOADABLE ONES** Load- and test resistors 0.01 up to 250 Kilowatt

DIE MODULAREN Drahtgewickelte

Lamellenfestwiderstände 0,15 bis 30 Kilowatt THE MODULAR ONES Wirewound lamina type fixed resistors 0,15 up to 30 Kilowatt

DIE ROBUSTEN Stahlgitterfestwiderstände 0,5 bis 250 Kilowatt THE ROBUST ONES

Steel-grid fixed resistors 0,5 up to 250 Kilowatt

Wir über uns

Mit FRIZLEN Leistungswiderständen haben Sie elektrische Leistung voll im Griff.

Unser umfassendes Know-how zeigt sich im kompletten Spektrum vom Einzelstück bis zur Serie, für Leistungen von 5 Watt bis 250 Kilowatt.

Einsatz- und Anwendungsgebiete stellen die Anforderungen, die Lösungen entwickeln wir.

Ihrem Anforderungsprofil entsprechend berechnen und fertigen wir Widerstände und Widerstandskombinationen unter Berücksichtigung Ihrer Vorgaben. Natürlich beraten wir Sie gern und ermitteln auf Wunsch die Widerstandsdimensionierung mit Hilfe EDV-gestützter Berechnung und Simulation.

Hochwertige Standard- sowie Sonderlösungen von FRIZLEN sorgen für Dynamik im Verbund mit leistungselektronischen Geräten in Maschinen und Anlagen. Bewegung zu stoppen, konstant zu halten und exakte Abläufe zu ermöglichen – dabei unterstützen wir die elektrische Antriebstechnik und verbessern so die Dynamik Ihrer Antriebe.

About us

Keep your electric power under control with FRIZLEN power resistors.

Our extensive know-how is demonstrated in a complete spectrum from single item up to series production, for power values from 5 watts up to 250 kilowatts. Different ranges of use and application set the requirements, we provide the solutions.

We design and produce resistors and resistor combinations exactly to meet your requirements. We are, of course, happy to advise you according to your specification. Upon request, we can determine resistor dimensioning using our computer-supported calculation and simulation system.

High-quality standard and special solutions from FRIZLEN ensure dynamics when you are dealing with high performance electrical equipment in machines and processes. We support electrically driven power engineering by stopping movement, keeping it constant and ensuring exact sequences, which improves the dynamics of your drive systems.

T 600 – DIE ROBUSTEN / THE ROBUST ONES

Stahlgitterfestwiderstände

0,5 bis 250 Kilowatt

Stahlgitterfestwiderstände als Einzelelemente, die einbaufähig sind und daraus aufgebaute Stahlgitterfestwiderstandsgeräte in verschiedenen Schutz- und Befestigungsarten.

- Mit und ohne Abdeckung mit Anschluss am Widerstand oder an Klemmen in Schutzart IPOO, IP20 oder IP23
- Für Wand- oder Bodenmontage oder für Kanaleinbau
- Thermisches Überstromrelais, Temperaturschalter oder FRIZLEN DC-Powerswitch für thermische Überwachung und Abschaltung
- Fremdbelüftet für große Leistungen, Parallelschaltung von Geräten für Leistungen größer 250 kW

Steel-grid fixed resistors 0,5 up to 250 Kilowatt

Steel-grid fixed resistors as individual components, that can be integrated into other units and composed to steel-grid fixed resistor units in different degrees of protection and mounting types.

- With or without cover, connection direct to the resistor or on terminals in degree of protection IPOO, IP20 or IP23
- For horizontal and vertical mounting and for integration into exhaust air installations
- Thermal overload relay, temperature switch or FRIZLEN DC-Powerswitch for thermal monitoring and switch off
- Forced ventilation for higher dissipation, switching in parallel of units for dissipation > 250 kW

Contents This list comprises steel-grid fixed resistors as individual components in the production series S, as well as resistor blocks in the series FE and FK.. that can be integrated into other units and composed to steel-grid fixed units in different degrees of protection and mounting types

RIZLE

Properties

very favourable price-performance-ratio

 \Rightarrow high power, high quality and low budget

individual components in 30 different resistor element values

 $\Rightarrow\,$ high ampacity up to 122 A per steel-grid fixed resistor, may be enlarged by switching in parallel

lower temperature coefficient than cast iron resistors

- $\Rightarrow\,$ therefore smaller dependence of the resistor value on temperature than cast iron resistors
- high heat capacity
- \Rightarrow overload resistant at short time load
- very robust construction
- \Rightarrow insensitive to vibrations
- enclosures made from hot galvanised steel sheet
- \Rightarrow various protection and mounting types (all series besides S and FE)
- temperature switch available
- \Rightarrow integrated warning for temperature monitoring (optional with many series)
- thermal overload relay available
- \Rightarrow integrated warning for high operating security (serialized with series FGFT)
- intrinsically safe
- $\Rightarrow\,$ to switch off the resistor safely by FRIZLEN DC POWERSWITCH (type series FGFX)
- UL-recognition for American and Canadian market (E212934)
- \Rightarrow on request for all marked series available

- load resistors for emergency units, generators, motors and electronic power sources
- starting resistors for DC motors
- stator resistors for squirrel-cage motor
- starting and regulating resistors for slip-ring rotor motor
- discharge resistors for batteries
- earthing resistors for low-voltage mains supplies

Technical details	
Construction Steel-grid fixed resistor elements Type series S	Our steel-grid fixed resistor elements (SG) are made out of chromium alloyed and heat- resistant steel sheets of alloy X10CrAl13 (material # 1.4724), which has a high specific resistance value of 0,75 Ω xmm ² /m. Both long sides of the SG are punched with slots in a meander-shaped current path. The ohmic value depends on the width of the straps. They are mechanically reinforced by strips of stainless steel with inlays of mica.
Spectrum	By the use of SG with a big ohmic range of 0,022 Ω to 5,6 Ω and a typical power of 500 W per steel-grid we can achieve a wide range of resistance and power values by variation of steel-grid number and ohmic value.
Resistance values/ Production tolerance/ Temperature dependency	Steel-grid fixed resistor elements have a smaller dependence of the resistance value on the steel-grid temperature than cast iron resistors, however a noticeably higher one than wire-wound resistors. The resistance value increases approx. +15% between cold and operating temperature. The given rated resistance values of each individual SG in the table on page T621E are about 8% higher than the resistance value in cold condition and about 7% below the resistance value at the operating temperature. The production tolerance is \pm 10%.
Energy absorption capacity/	The energy absorption capacity varies per SG at a temperature increase of 300 K in dependancy of the ohmic value between 50 and 70 kWs.
lime constant	The average thermal time constant is 100 s.
Resistor blocks Type series FE	If larger power ratings are to be obtained, several SG are assembled by M12-thru bolts and isolating mica tubes to a resistance block. The isolation between 2 neighbouring SG is effected by glazed ceramic rolls, the current conduction by stainless steel rolls. The resistance block is prestressed by cup springs and so held under constant contact pressure. In addition to that individually screwed conductor rolls between two neighbouring SG are possible. A resistor block may consist of identical SG or of different SG with lugs as taps.
Resistors Type series FK; FGF; FA; FS	In order to facilitate the integration, and/or to provide different degrees of protection, various kinds of enclosures are used. The enclosures are manufactured out of hot-galvanized and perforated steel sheet and therefore are well protected against corrosion. Also an extra varnish in RAL 7032 is available with an additional charge as well as enclosures in stainless steel (alloy 1.4301/AISI 304).

IP 23

FRIZLE	Steel-grid fixed resistors
Protective measures	All our power resistors with degree of protection IP 20° or higher correspond to safety class system I, i.e. we provide connections for protective earth conductors according to EN 61140.
C€	Devices with degree of protection IP 20 or higher correspond to the CE low voltage directive. Power resistors being passive electronical or electrical units are not affected by the specific EMC standards. They do not produce any interfering radiations nor are they affected.
Air und creepage distances	Air and creepage distances are rated according to IEC 664 (DIN EN 0110 part 1) for the overvoltage category III and degree of pollution 3 for grounded three-phase mains supplies up to 3 x 500 V. Testing voltage 2.5 kV AC. These data are valid for all devices that are connected to mains voltage and derived voltages, as for example the intermediate circuit voltage of frequency converters. Do not conclude from the calculated relation between the rated power and the maximum producible ohmic value to the rated voltage!
UL-recognition	All important type series do have an UL- recognition both for the American and for the Canadian market. The devices were certified according to UL 508 under the number E212934. This recognition is the same as a recognition according to CSA C22.2 No.14. For further information please check the UL-flyer. (Please ask for it or visit us at www.frizlen.com)
Excess current protection $ \begin{array}{c} & 95 & 97 \\ & 95 & 9$	A protection of the resistors against overloading or excess temperature - as demanded in standards - can be realized with the help of a thermal overload relay provided by the user. The set current must correspond to the rated current of the resistor, that is calculated according to continuous duty power and resistance value corresponding to Ohm's law (formula: see "terminal details" p. T618E). Concerning the series FGFT the thermal overload relay is a component of the device - with exceeding of the rated current a signal contact is released. There will not be a disconnection of the resistor. Resetting by hand.
Excess temperature protection	Another kind of the excess temperature monitoring, particularly suited for long-term overloading, is the equipment with a temperature switch. In IP 20/23-resistor devices it is wired on terminals, in IP 00 resistors the switch is directly connectable and releases a signal contact, when the set temperature is exceeded. There will not be a disconnection of the resistor. See type series FEQ / FKEQ / FGF.Q / FKQ / FAQ / FSQ / F.VQ
	You can inform yourselfs about function and restrictions by our data sheet

We can send it to you on request.

with Frizlen

Intrinsically safe version

DC-POWERSWITCH

Integrated overload switch for a maximum of 850 VDC to protect the resistor. It protects the integrated resistor against constant overload and against too high short time peak power, e.g. caused by a false operational mode or a fault by an short circuited chopper transistor. Possible damage in the environment by overheating and burning are effectively avoided.

FRIZLE

So you receive an intrinsically safe resistor protection degree even for IP20^{\odot}. The FRIZLEN DC-POWERSWITCH can also be integrated in the switch cabinet. After a successful fault clearance the DC-POWERSWITCH can be switched on like a normal automatic cutout.

We can send you more technical details and characteristics on request.

Attention: Frizlen DC-POWERSWITCH are only suited for monitoring and disconnecting from DC-voltage with pure resistive load (DC1) up to 850 VDC.

Contact ratings of the signal contacts of temperature switches and thermal overload

Contact rating

Starting up

ea)

relays:
2 A / 24 VDC (DC11)

• 2 A / 230 VAC (AC11)

Contact ratings of the signal contacts of the DC-POWERSWITCH:

- 5 A / 24 VDC (DC11)
- 10 A / 230 VAC (AC11)

Resistors in industry version. On first operation during commissioning, the steelgrid resistors will produce some smoke. This is due to the lubricant used in the manufacturing process of the resistor element.

Storage temperature/ Operation temperature/ Installation altitude	Storage temperature: Operation temperature: Installation altitude:	 - 40° C to 80° C - 30° C to 40° C. If the ambient temperature is higher than 40°C, you have to decrease the continuous dissipation by 4% per 10 K temperature rise! 2000 m above sea level, you have to decrease the continuous dissipation for 10% per 1000 m altitude maximum altitude 5000 m above sea level

Restrictions are to be made for the type series FGFT. and FGFX. because of the built-in monitoring device. Operation temperature: - 20° C to 40° C.

Typical power/ Continuous dissipation/ Ventilation / temperatures The given typical power values are valid for 100% duty cycle factor (DCF) (continuous dissipation) under the following conditions:

- temperature rise of 200 K at the surface of fixed resistor enclosures (degree of protection> IP00)
- temperature rise of 300 K at the surface of fixed resistor elements (degree of protection IP00).
- unhindered access of cooling air
- unhindered diverting of warmed up air (mind a minimum separation distance of approx. 200 mm to neighbouring components/walls and of approx. 500 mm to components above/ceiling)

Ventilation / temperatures Since electrical energy is converted into heat, heating up of the exhaust air and of the enclosure at the air outlet is inevitable. The highest temperature with typical power may be maximum 200°C above the ambient temperature. Since the cooling of the devices is accomplished by convection and/or forced ventilation (series FAV/ FSV), the above mentioned aspects have absolutely to be considered.

In cases of insufficient cooling or false mounting the resistor or the surrounding devices units could be overheated or ruined.

(ad)

Steel-grid fixed resistors

Depending upon use it can be possible to increase the continuous dissipation of the resistors, if higher temperatures are accepted. With an increase of e.g. of 130% of the typical power you will have a rise in temperature of 350K at the surface of the resistor. In multi-storeyed resistors and in protection degree IP23 with waterproof roof is it possible to receive a temperature rise up to 500K. In other cases of applications the continuous dissipation must be reduced, for example with temperature sensitive devices in the surrounding. The dependence between temperature rise and actual continuous dissipation is shown in the diagram below.

Excess temperature in dependence of continuous dissipation

Normal operation range (up to 130%):

Recommended operation range for maximum product life and failure free operation

Allowable threshold (up to 160%):

RIZLEN

Allowable operation range, danger of shorter product life and higher failure probability

Unallowable operation range (more than 160%):

Danger of excessive heat and destruction of resistor and neighbouring components

Short time dissipation/ Total cycle time/ Duty cycle factor(DCF) At many applications resistors are not loaded in continuous but in short time operation. In the following you will find indications, how to calculate the allowable short time dissipation with the help of the duty cycle factor (DCF) and the overload factor (OLF). If the DCF factor is not known, it can be calculated as follows:

NZLE

$$DCF_1 = \frac{48s}{120s} = 0,4 = 40\%$$
 $DCF_2 = \frac{7,5s}{30s} = 0,25 = 25\%$

Warning: The total cycle time may be maximum 120 s shorter total cycle times are possible. The total cycle times for motors are mostly higher than 120 s

Overload factor(OLF)

By comparison of the known DCF-factor with the following diagram or table you can work out the overload factor (OLF) and/or the continuous and the short time dissipation.

Overload factor (OLF) in dependence of duty cycle factor (DCF) (Total cycle time = 120s)

DCF	1%	3 %	6%	15%	25%	40%	60%	80%	100%
OLF	20	12	7,6	4,0	3,0	2,2	1,5	1,12	1,0

The continuous and the short time dissipation can be calculated as follows:

Short time dissipation = Continuous dissipation × OLF Continuous dissipation = $\frac{Short \ time \ dissipation}{Overload \ factor(OLF)}$

Calculation example given:

continuous dissipation

wanted:

- Resistor with a short time dissipation of 100 kW for 48 s and a total cycle time of 120s
- The duty cycle factor (DCF) is 48 s : 120 s x 100% = 40%
- Overload factor (OLF) for 40% DCF, according to table it is 2,2
- The continuous dissipation is 100 kW : 2,2 = 45,5 kW;
- \Rightarrow You need a resistor with a continuous dissipation of at least 45,5 kW!

FRIZLEN GMBH U. CO KG.

Terminal details/ Monitoring devices/ Cross section

Rated current and cross section of terminals and monitoring types.

Туре	abbreviation	rated current in A with 100% DCF	rated current in A with 40% DCF	maximum cross section

cage clamp terminal out	ST2,5	20	25	up to 2,5 mm²; AWG 26 - 12
of PA	ST 4	30	38	up to 4,0 mm²; AWG 20 – 10
thermal overload	signal contact	2	-	up to 2,5 mm²; AWG 16- 12
relay	main connection	bis 13/24/80	17/30/100	2,5/4/25 mm²; AWG 20 - 6
DC-POWER-	signal contact	10	-	up to 1,5 (2,5) mm²; AWG 16 - 12
SWITCH FPS	main connection	40	50	up to 16 mm ² ; AWG 4

The values in the brackets are valid for solid conductor or single-wired.

The rated current is calculated in each case due to the Ohm's law as follows:

$$I = \sqrt{\frac{P}{R}}$$

whereas P is the power of the resistor and R ist he value of the resistance

If terminals are required, the connections are wired by means of flexible, heat resistant, silicone-insulated wire on a terminal strip that is located in the lower and/or front part of the equipment within the area of the entering cooling air. If the wiring is accomplished by the user, make sure that a heat resistant wire is used.

For the UL-versions we use wires with UL-admission (other wire-isolations on request).

For the type series FK /FA /FS 3.. and for F.V 38.. there is an undrilled cable entry strip in the lower part. It can be provided by the user with appropriate drillings for cable glands as strain relief.

Please mind the mounting indications in the corresponding type series! You will find these icons in the data sheets:

Allowable: On horizontal surfaces

Allowable: On vertical surfaces terminals at the bottom

Not allowable: On vertical/horizontal surfaces terminals at the top, left or right

Allowable: On vertical surfaces

Dimensioning example Braking resistor given: Maximum intermediate circuit voltage 650V : $U_{ZK} = 650 V$ Smallest allowable resistance value: (from data sheet of frequency converter) $R_{min} = 25 \Omega$ $I = \frac{U_{ZK}}{R_{\min}} = \frac{650V}{25\Omega} = 26A$ maximum allowable chopper current duty cycle factor for braking operation (corresponding to the application), for a hoist drive e.g. 40 % DCF referring to a total cycle time of 120 s DCF = 40% degree of protection IP 20 in fixed condition short time dissipation of the resistor with 40%DCF $P = \frac{U^2}{R} = \left(\frac{650V^2}{25\Omega}\right) = 16,9kW$ wanted: continuous dissipation = short time dissipation : overload factor (s. p. T616E) continuous dissipation = 16,9 kW : 2,2 = 8,5 kW number of steel-grids = continuous dissipation : dissipation per SG number of steel-grids = 8,5 kW : 0,5 kW \approx 17 SG selection of steel-grids: resistance value of a SG = R_{min} : SG-number = 25 Ω : 17 = 1,62 Ω The ohmic value should not be smaller than R_{min} altogether, since otherwise the allowable chopper current is exceeded! SG selection of p. T621E = 10 pieces S 23 – 1,5 Ω and 7 pieces S24 – 1.8 Ω total ohmic value is 27,6 Ω selection of products: With degree of protection IP 20 in fixed condition - series FGF.. With 17 steel-grids - construction size 312 17.. with 2 terminals up to 35 A, without temperature switch - type FGFG The complete type designation is FGFG 3121702 - 27.6 (s.p. T624Eff) Dimensioning example Load resistor aiven: Rated voltage U of supply unit: $U = 3 \times 230/400 \text{ V}$ $P = 15 \, kW$ • duty cycle factor: DCF = 100% rated dissipation: star connection, star point in the unit degree of protection IP 23 wanted: $I_N = \frac{P_N}{\sqrt{3} \times U_N} = \left(\frac{15kW}{\sqrt{3} \times 400V}\right) = 21,7A$ rated current per phase with star connection: $R_{wanted} = \frac{U_N}{\sqrt{3} \times I_N} = \left(\frac{400V}{\sqrt{3} \times 21,7A}\right) =$ nominal value of resistance per phase with star connection: $R_{cold} = 0.95 \times R_{wanted} = 0.95 \times 10.7\Omega$ = value of resistance in cold condition: If the demanded rated dissipation is to be achieved at operating temperature in the range of the resistance tolerance, it is advisable to consider the value of resistance in $R_{cold} = 0,95 \times R_{wanted}$ cold condition. Then you can make your selection of steel grid. Selection of steel-grids of p. T620E by the rated current of 21,7 A: S 21 – 1,0 Ω number of SG per phase = value of resist. in cold condition: ohmic value per SG selection of steel-grids: . number of SG = 10,2 Ω : 1,0 \approx 10 SG per phase – 3phases is 30 S 21 – 1 value of resistance in cold condition is therefore 3 x 10 Ω . resulting rated dissipation: 3 x 10 SG per 0,5 kW = 15 kW • with degree of protection IP 23 - series FS.. with 30 steel-grid fixed resistors - size 313 30.. or 322 30.. selection of products: (size 313.. is lower, size 322.. is narrower) with 3 terminals (star point in the unit) number of terminals ...03 with 4 terminals (star point wired on 1 terminal) number of terminals ...04 The complete type designation is FS 313 30 03 - 3 x 10,7 (low unit, star point in the unit) (type series FS s. p. T629E)

500 W for integration

Steel-grid fixed resistor elements S 1 - S 30

S14 – 0,27 with additional connecting lug

Technologies

- particularly flat design
- overload resistant
- continuous dissipation 500 W $^{\odot}$
- energy absorption capacity with
- $\Delta T = 300 \text{ K}$, from 50 up to 70 kWs • integration possible

As accessories we deliver 1 or 2 lugs to each resistor element with connection screws M10 (S 1 - S 10) or M6 (S 11 - S 30). Normally they are not fixed, we will fix them upon request.

We produce steel-grid fixed resistor elements in a wide range of resistance values of 0,022 Ω up to 5,6 Ω and a typical power of 500 W⁽⁰⁾ per grid.

The given nominal ohmic values are about 8% above the value of cold condition and 7% below the value of operating temperature. The production tolerance is $\pm 10\%$.

We achieve a wide range of resistance values and wattage rating by variation of number of steel-grids and resistance values.

Please consider the different designs and construction forms of the following series.

The indicated ratings are valid for an ambient temperature of max. 40° C at sufficient ventilation. The indicated values for the duty cycle factor (%DCF) are preferred values and refer to a maximum total cycle time of 120 s.

You will find further indications for dimensioning of a resistor for short time dissipation in chapter Technical Details pages T613E to T620E.

Steel-grid fixed resistor element, degree of protection IP 00, for integration into units. Connection at the resistor

^① only valid for S3 – S30

Type series FE 31..

1,0 – 22 kW for integration

Technologies

- for smaller up to middle power rating
- integration and combinations possible
- for mounting into switch cabinet, resistor unit or ventilation duct
- continuous power rating up to 22 kW
- optional with temperature switch (TS), with fast-on connectors 6,3x0,8; type designation would be FEQ 31...

Each resistor block can be equipped with 2 or more connecting lugs Depending on the current the connection is realized by M6 or M10 screw. The mounting into the switch cabinet, resistor unit or ventilation duct is made by M12 thread bolts.

By means of series connection of steelgrid elements we achieve higher ohmic values; by connecting in parallel of several resistor blocks we achieve higher currents and power ratings. We can also mount several partial resistors into one resistor block (e.g. 3 phases), separated by insulation rolls.

Warning:

Not more than 3 resistor blocks should be mounted on top of each other! For customer wiring you should use a heat resistant wire.

Application

An important application is the use as load resistor, where high power rating is demanded by the user.

Further applications are e.g. the mounting of the steel-grid blocks into a ventilation duct with simultaneous forced ventilation by the exhaust air of a diesel engine radiator.

Steel-grid fixed resistor block, degree of protection IP 00 for integration into switch cabinets, units or ventilation ducts. Connection directly at the resistor. ⁽²⁾ optional, type designation would be FE.U 31..

1,0 – 22 kW for integration

Type series FKE 31..

Steel-grid fixed resistor, degree of protection IP 00, with side plates for integration into a switch cabinet. Connection directly at the resistor. $^{\circ}$ optional, the type designation would be FKE.U 31..

Electrical and mechanical data

Technologies

- especially compact construction form, dimensions depend on number of installed steel-grids.
- small to middle power rating
- continuous power rating up to 22 kW
- integration into switch cabinet possible
- temperature switch optional (TS), with fast-on connectors 6,3x0,8; type designation would be FKEQ 31...

Each resistor can be delivered with 2 or more connection lugs. Depending on the current the lugs are equipped with M6 or M10 screws. The resistor is mounted in a cabinet by means of the two side plates.

Mounting of several partial resistors (e.g. 3-phases) into one resistor unit is possible. They are separated by insulation rolls.

You will find suggestions for the dimensioning of the resistor for short time load in chapter "Technical Details", pages T613E to T620E.

For customer wiring you should use a heat resistant wire.

Application

Customized solutions like integrating a resistor unit into a switch cabinet, when a very compact construction form is needed.

Thus various kinds of solutions are possible for many applications such as:

- load resistors
- charging or discharging resistors
- braking resistors
- starting and regulating resistors etc.
- damping resistors

Type series FGF.. 31..

) IIII I

Technologies

- low priced type, very compact design
- continuous power rating up to 22 kW
- for mounting on top of a switch cabinet (all types besides FGFD..)
- for integration into a switch cabinet with terminals that are protected against contact (type FGFD..)
- units may be wall or plate mounted, perforated steel sheet at the front, top and bottom, terminals at the bottom.
- terminal type and size selectable according to mounting place and connection technics
- optional with temperature switch (type FGF.Q)
- optional with thermal overload relay (type FGFT)
- optional in intrinsically safe version with FRIZLEN DC-POWERSWITCH³ (type FGFX)

Application

These units are fitting especially for mounting on, beside or in a switch cabinet by their relatively flat and compact construction in 6 widths with various connections and monitoring possibilities (Please mind the description of the types).

An important application is the use as braking resistor for motor/generator drive of motors with frequency converters, where high power rating is combined with low budget solution.

You will find suggestions for the dimensioning of the resistor for short time load at chapter Technical Details, pages T613E to T620E.

Warning

When resistor is integrated into a cabinet we recommend to provide a corresponding forced ventilation by the user for better removal of larger dissipations.

Steel-grid fixed resistor unit, degree of protection IP 20 if mounted on an appropriate surface, with zinc plated steel enclosure. It is equipped with max. 2 terminals of different kinds mounted in or at the enclosure or in the attached terminal box. Some types can be provided with a temperature switch or with an integrated thermal overload relay or DC/POWERSWITCH. For your selection of a specific type you will find tables on the next page.

 $^{\ensuremath{\mathbb{O}}}$ if mounted on an appropriate surface

^③ optional (not for FGFG and FGFX), type designation would be FGF..U 31..

Details of the different types

Type FGFG:

Version with 2 flat type terminals up to max. 35 A rated current in the attached terminal box with cable gland. An additional temperature switch is not possible.

Type FGFK(Q):

Version like FGFG, with a bigger attached terminal box with cable glands, the space is sufficient for 2 terminals up to M8 (max. 115 A rated current), and for 2 additional porcelain terminals for an optional temperature switch (FGFKQ).

Type FGFL(Q):

Version, where all terminals are mounted on the terminal strip inside the housing. Terminals up to M8 (max. 115 A rated current) are accessible after disassembling a part of the cover. If equipped with temperature switch, there are 2 additional porcelain terminals on the terminal strip (Type FGFLQ).No cable glands.

Type FGFD(Q):

Construction with feed-through terminals up to max. 65 A that are protected against contact and directly fixed on the side plate. It is a space-saving solution for integrating into a switch cabinet. If equipped with temperature switch there are 2 additional protected feed-through terminals (FGFDQ).

Type FGFT:

Version with integrated thermal overload relay in the attached terminal box with cable glands up to max. 80 A rated current. With integrated short-circuit and overload signalling. Connection directly at the overload relay.

Type FGFX:

Intrinsically safe version with integrated FRIZLEN DC-POWERSWITCH in the attached terminal box with cable glands, up to max. 40 A rated current. With integrated short-circuit and overload protection inclusive switching off the resistor and signalling. Connection directly at the FRIZLEN DC-POWERSWITCH⁽²⁾.

²DGBM Nr. 20 2009 015 851.9

Attention: Only for DC voltage up to 850 VDC.

Rated current and cross section of terminals and devices

See technical details on page T618E.

Example: 2 device terminals + temperature switch (2 terminals) => FGFKQ 31...04

① dim. C1 is only valid for Type FGFD (dimension sheet 16M0442)

2 dim. C2 is only valid for Type FGFG (dimension sheet 16M0041)

③ dim. C3 valid for types FGFK (dim. sheet 16M0410), FGFT (dim. sheet 16M0086) and FGFX (dim. sheet 16M0841)

for type FGFL dim. "B" is valid, as design without term.box (dim. sheet 16M0424)

1. Signalling-no disconnection! This warning has to be considered by the customer, e.g. by a warning or

disconnection of the mains through the customer. Details, on page T615E.

1a) with temperature switch (FGF.Q)

Different types can be equipped for temperature monitoring with a temperature switch which monitors an overloading of the resistor by a normally closed contact free of potential (NCC).

Connections pls. look at picture 1a)

1b) with thermal overload relay (FGFT)

An eventual overload of the resistor is monitored by the thermal overload relay which is mounted in the attached terminal box. This is accomplished by NCC and NOC contacts. Also for signalling high short time peak power.

Connections pls. look at picture 1b)

Pic. 1a)

2. Disconnecting and signalling!

with FRIZLEN DC-POWERSWITCH (FGFX) up to 850 VDC and up to 40 A

This type series with integrated overload switch in the attached terminal box is able to protect the integrated resistor from constant overload and from too high short time peak power, e.g. caused by a false operational mode or a fault by an short circuited chopper transistor.

This option for protection not only signals the hardware default, it switches off the object / the resistor absolutely reliable! Possible damage in the environment by overheating and burning are effectively avoided.

After a successful fault clearance the DC-POWERSWITCH can be switched on like a normal automatic cutout.

Connections pls. look at picture

This table represents only a selection of our programm. All numbers of steel-grids corresponding to our types between 2 pc. (1,0 kW) und 24 pc. (12 kW) are available. Type code and selection of units see Technical Details pages T613E to T620E.

Example of dimensioning and selection of a specific unit:

One phase braking resistor for frequency converter drive with temperature switch, short time dissipation 24 kW at 15% DCF, total cycle time shorter than 120 s, intermediate voltage circuit 650V; resistance value 18 Ω ; calculating of continuous dissipation: 24 kW : 4,0 = 6,0 kW; chosen: FGHDQ 3111204 - 18

Technologies

- low priced type, very compact design
- for middle power ratings up to 12 kW
- for space saving integration into a switch cabinet
- optional with temperature switch wired on two terminals. Type designation would be FGHDQ. 31...

The given power rating values are valid for 100%CD (continuous dissipation). For short time operation you will find the values in the following table as a function of the duty cycle factor (DCF). Just multiply by the corresponding overload factor (OLF).

DCF	60%	40%	25%	15%	6%
OLF	1,5	2,2	3,0	4,0	7,6
These ov	erload	factors	are va	alid for	a total

cycle time of maximum 120 s

You will find further details in chapter Technical Details pages T613E to T620E.

Application

An important application is the use as braking resistor for motor/generator drive of motors with frequency converters, where middle power ratings are to be integrated into a switch cabinet in a space saving way.

Warning

The user has to make sure that large dissipations are removed. We recommend an adequate forced ventilation.

1,5 – 66 kW with up to 40 terminals

Type series FK 3..

FK 3236309

Technologies

- for middle and high power ratings
- Up to 40 FK-terminals
- continuous dissipation up to 66 kW
- for floor-level mounting
- optional with temperatue switch (TS), type designation would be then FKQ 3...

The necessary terminals are mounted on a terminal strip in the lower part of the device.

You will find suggestions for the dimensioning of the resistor for short time load at chapter Technical Details, pages T613E to T620E.

Application

This construction is especially appropriate for big power ratings that are to be low in weight and in price. The same applies to the installation in closed electrotechnical rooms, where the degree of protection IP 00 is allowed.

Special design

- dimensioning for forced ventilation supplied by the user
- special construction forms for integration into exhaust air ducts for engine radiators

Option

with temperature switch wired on 2 terminals, type then FKQ...

Steel-grid fixed resistor unit, degree of protection IP 00 with 2 side-panel end plates out of zinc plated steel sheet. Ceramic isolated flat or bolt terminals of 35 A up to 400 A in variable combinations available.

 $^{\odot}$ optional, type designation would be FK.U 3..

Type series FKK.. 3..

5,0 - 250 kW, in duct design

Technologies

- for middle or high power ratings
- low priced solution for existing forced ventilation provided by the customer
- continuous dissipation up to 250 kW
 prepared for integration into
- customer's duct.
- For exhaust air temperatures up to 60°C
- optional with temperature switch wired on two terminals, type designation would be FKKEQ 3...

We provide ceramic insulated flat or bolt terminals of 35 A up to 400 A and mount the required terminals into an attached terminal box.

On behalf of a large range of dimensions, vertically as well as horizontally, we realize all kinds of duct cross sections.

Application

An important application is the use as load resistor for emergency power units.

In cases where a diesel power unit is to be protected by a base load against "wear" due to small load or when necessary or compulsary load tests of efficiency of the power unit must be accomplished.

We are specialists in customized solutions!

Special designs

- integration into ducts, provided by the customer, type series FKKF..
- integration kit for integration by the user
- up to 5 blocks can be mounted on top of each other
- with integration of 2 resistor sets in a row
- with wind indicator monitoring

^{IP} E ⊸2 II III

Steel-grid fixed resistor unit, degree of protection IP 00 integrated in a duct section for integration by the user into existing or new exhaust air installations, in a zinc steel sheet duct with attached terminal box and optional temperature switch.

This table only represents the maximum number of steel-grids of the specific size of unit and the corresponding maximum typical power. All numbers of steel-grids corresponding to our types between 3 pc. (1,5 kW) und 132 pc. (66 kW) are available. Type code and selection of units see Technical Details pages T613E to T620E.

Example of dimensioning and selection of a specific unit:

see Technical Details pages T613E to T620E

Technologies

- for middle and high power ratings
- Up to 40 FK-terminals
- continuous dissipation up to 66 kW
- for floor-level mounting
- for outdoor location (FS...)
- optional with temperature switch (TS) wired on two terminals, the type designation would be F.Q. 3...

The necessary terminals are mounted on a terminal strip in the lower part of the device and are accessible after demounting a cover.

By the use of 12 different enclosure sizes – with 3 heights and 4 widths we can well adapt the construction form to the given space. In the range between 14 and 88 steel-grids you can make your choice between smaller and lower forms.

You will find suggestions for the dimensioning of the resistor for short time load at chapter Technical Details, pages T613E to T620E.

Application

An important application is the use as braking resistor for motor/generator drive of motors with frequency converters, where big power ratings are necessary for outdoor location combined with degree of protection IP 20 or IP 23.

Special design

- For special applications also in a four block design
- Enclosure additionally varnished in RAL 7032 or other colours
- Connection parts and enclosure out of stainless steel 1.4301/AISI304

Type series FS 319.. / FS 320..

0,5 - 5,0 kW with 2 terminals

Steel-grid fixed resistor unit, degree of protection IP 23 with weatherproof roof, appropriate for outdoor mounting, in zinc steel sheet enclosure, for connection with 2 terminals, with several holes for cable glands, that are closed by rubber sockets.

Technologies

- for smaller power ratings
- compact construction form
- continuous dissipation up to 5,0 kW
- units may be wall mounted , horizontal mounting not admitted
- for outdoor mounting (FS...)

The necessary terminals are mounted in the lower part of the device and are accessible after demounting the cover. We can provide 2 flat or 2 bolt terminals M6 or M8.

You will find suggestions for the dimensioning of the resistor for short time load at chapter Technical Details, pages T613E to T620E.

Application

On behalf of small dimensions and compact construction form this type series is especially appropriate as load resistor for small power ratings, if degree of protection IP 23 is necessary.

A lot of applications are possible because of the high degree of protection and the wall mounting, such as the outdoor mounting.

Special design

 degree of protection IP 20 (without roof), type FA 319.. / FA 320..

This table only represents the maximum number of steel-grids of the specific size of unit and the corresponding maximum typical power. All numbers of steel-grids corresponding to our types between 1pc. (0,5 kW) and 10 pc. (5,0 kW) are available.

Example of dimensioning and selection of a specific unit:

One phase starting resistor as constant series resistor for motor 220 V DC; 8,5 kW, 51 A; resistor value $0,72 \Omega$; continuous dissipation approx. 1,9 kW; chosen: FS 3190402 – 0,72 with continuous dissipation 2 kW; this corresponds to 4 steel-grids S12 - 0,18 Ω = 0,72 Ω , connection with 2 bolt terminals M6

Type series FAV 3../ FSV 3..

IP IP

70 – 500 kW with several terminals

FAV... Steel-grid fixed resistor unit, degree of protection IP 20, without weatherproof roof, air outlet on top,

FSV... Steel-grid fixed resistor unit, degree of protection IP 23 with weatherproof roof, for outdoor location, air outlet at the side via air deflectors in the upper area.

In completely closed zinc sheet enclosure with protective grid at the bottom and powered ventilation by an integrated ventilator. With air flow monitoring by wind indicator relay. Ceramic insulated flat or bolt terminals of 35A up to 400A in variable combinations available or copper busbar.

Electrical and mechanical data

• for high power ratings

Technologies

- power ventilated by integrated 230/400 V; 50 Hz axial flow fan
- for floor-level location
- continuous dissipation up to 500 kWparalleling of 2 or more units for
- even higher powersfor outdoor location (FS...)

The necessary terminals are mounted on a terminal strip in the lower part of the device and are accessible after demounting a cover. Behind the cover is a unbored conduit strip in which you can

drill the needed holes for cable glands.

By the use of steel-grid elements with a typical power of 1100 W up to 1700 W per steel-grid with forced ventilation we cover a power range of up to 500 kW per unit. Higher power ratings can be achieved by parallel connection of several devices.

Application

An important application is the use as load resistor for the testing of emergency power installations. Protection degree IP 20 is sufficient for installing in factory rooms, IP23 is necessary for outdoor location.

Special design

- with integrated switching devices in an attached switch cabinet to control the partial resistors
- with 2 temperature switches wired on terminals.
- special voltages of fan
- please ask for devices with higher power ratings or other construction forms
- mobile, for test areas by rollers

Standard resistors as brake - resistor

TEL: 07144/8100-0 FAX: /207630 Subject for alteration

Steel-grid fixed resistor elements S 301G – S 321G

Technologies

- particularly flat design
- high overload capacity
- continuous dissipation 500 W $^{\odot}$
- energy absorption capacity with $\Delta T = 300$ K, from 150 up to 200 kWs
- integration possible

As accessories we deliver 1 or 2 lugs to each resistor element with connection screws M12. Normally they are not fixed, we will fix them upon request. Type designation: S301GF1 – S321GF1 (1 lug mounted), S301GF2 – S321GF2 (2 lugs mounted).

We produce steel-grid fixed resistor elements in a range of resistance values of 0,0022 Ω up to 0,1 Ω and a typical power of 500 W ⁽¹⁾ per grid.

The given nominal ohmic values are about 8% above the value of cold condition and 7% below the value of operating temperature. The production tolerance is $\pm 10\%$.

The indicated ratings are valid for an ambient temperature of max. 40° C at sufficient ventilation. The indicated values for the duty cycle factor (%DCF) are preferred values and refer to a maximum total cycle time of 120 s.

You will find further indications for dimensioning of a resistor for short time dissipation in chapter Technical Details pages T613E to T620E.

Remark: Higher ohmic values with lower energy absorption capacity are available on request.

500 W, up to 200 kWs, for integration 0,0022 up to 0,1 ohm

Steel-grid fixed resistor element, degree of protection IP 00 for integration into units. Connection at the resistor. $^{\textcircled{0}}$ in preparation

00

0,0022 up to 0,1 ohm

Ε

Steel-grid fixed resistor elements S301A – S321A

S301A - 0,0022

Technologies

- Design for building extremely compact resistor combinations, optimized for high energy absorption capacity
- high overload capacity
- energy absorption capacity with $\Delta T = 300$ K, from 150 up to 200 kWs
- integration possible

Steel-grid resistor elements are produced in a range of resistance values of 0,0022 Ω up to 0,1 Ω . With the German patented design we can realize extremly compact resistor combinations with very space-saving dimensions. Please look at our pages T635E and T637E.

The given nominal ohmic values are about 8% above the value of cold condition and 7% below the value of operating temperature. The production tolerance is $\pm 10\%$.

The connections are realised by screws M12 at the attached connecting lugs.

The indicated short time power values can be absorbed within the given time and are valid for a ambient temperature of max. 40°C and for an excess temperature of 300 K.

A following break of 15 min. for cooling off with sufficient ventilation must be accepted before a new energy load can follow.

Remark: Higher ohmic values with lower energy absorption capacity are available on request.

Steel-grid fixed resistor element, degree of protection IP 00 with angled connection side, for integration into units for extremely compact construction, with optimized energy absorption capacity. Connection at the resistor. Registration: German patented design no. 202012010188.9

Remark: The given short time power can be absorpted in the given time with a following break of 15 min.

Type series FEY 31..

1,0 - 19,5 kW, up to 7,8 MWs, for integration, low ohmic values, high energy absorption capacity

Steel-grid fixed resistor block in protection degree IP 00 for high energy absorption capacity, for integration into switch cabinets, devices or ventilation ducts. Connection directly at the resistor.

in preparation

Electrical and mechanical data

Technologies

- for high energy absorption capacity
- for high continuous currents
- integration and combinations possible
- for integration into switch cabinet
- continuous dissipation up to 19,5 kW
- energy absorption capacity with $\Delta T = 300$ K, up to 7,8 MWs
- optional with temperature switch (TS) with fast-on connections 6,3x0,8, type FEYQ 31...

Each resistor device can be equipped with 2 or more connecting lugs. The connections are made with screws M12 at the mounted connecting lugs. The integration in a switch cabinet, machine or in a duct is made by means of 2 threaded bolts M12.

We achieve a wide range of resistance values and wattage rating by variation of number of steel-grids and resistance values.

The given power rating values are valid for 100%CD (continuous dissipation). For short time operation you will find the values in the following table as a function of the duty cycle factor (DCF). Just multiply by the corresponding overload factor (OLF).

DCF	60%	40%	25%	15%	6%
OLF	1,5	2,2	3,0	4,0	7,6

These overload factors are valid for a total cycle time of maximum 120 s

Warning:

Not more than 3 resistor blocks should be mounted on top of each other! For customer wiring you should use a heat resistant wire.

Application

- filter resistor
- FRT resistor
- Crowbar resistor
- load resistor
- charge/discharge resistor
- current limiting resistor

This table represents only a selection of our program. All numbers of steel-grids between 2 pcs.. (1,0 kW) and 39 pcs. (19,5 kW) corresponding to our types are available. For the type code and selection of units you will be assisted from us.

Example of dimensioning and selection of a special unit:

Three phase filter resistor, for 3 x 1,0 kW and 3 x 690 V AC, resistor value 3 x 35 mΩ; selected: $3 \times 2 S312G - 0,018$ with each 0,5 kW ($\sum 3 \times 1$ kW) = 3×36 mΩ; type FEY 3100606 - 3×0.036 with continuous dissipation $3 \times 1,0$ kW, connection on 6 connection lugs with screws M12 at the resistor

Type series FEP 31..

Technologies

- for very high energy absorption capacity, for a short time within seconds
- for short time high currents
- integration and combinations possible
- for integration into a switch cabinet
- energy absorption capacity with $\Delta T = 300$ K, up to 7,2 MWs

Each resistor device can be equipped with 2 or more connecting lugs. The connections are made with screws M12 at the mounted connecting lugs. The mounting in the switch cabinet, machine or in the duct is made by means of 2 threaded bolts M12.

The applicated steel-grid resistor elements are produced in a range of resistance values of 2,2 m Ω up to 100 m Ω (please look on page T633E). With the German patented design we can realise extremly compact resistor combinations with very space-saving dimensions.

The given nominal ohmic values are about 8% above the value of cold condition and 7% below the value of operating temperature. The production tolerance is $\pm 10\%$.

With the variation of the number of resistor elements and ohmic values a wide range of the resulting ohmic values and energy absorption capacities can be covered.

The connections are realized by screws M12 at the attached connecting lugs.

The indicated short time power values can be absorbed within the given time and are valid for a room temperature of max. 40°C and for an excess temperature of 300 K. A following break of 15 min. for cooling off with sufficient ventilation must be accepted before a new energy load can follow.

Application

- FRT resistor
- LVRT resistor
- crowbar resistor
- charge-/discharge resistor
- emergency stop resistor

150 kWs up to 7,2 MWs for integration, compact sizing, high energy absorption capacity

Steel-grid fixed resistor block in protection degree IP 00 for very high energy absorption capacity or high short time dissipation in a extremely compact design. For integration into a switch cabinet. Connection at the resistor. Registered design protected construction. Not recommanded for continuous dissipation or DCF application.

Registration: German patented design no. 202012010188.9

This table represents only a selection of our program. All numbers of steel-grids between 2 pcs. (300 kWs) and 36 pcs. (7,2 MWs) corresponding to our types are available. For the type code and selection of units you will be assisted from us.

Example of dimensioning and selection of a special unit:

FRT load resistor, three-phase, for short time 3 x 1 MWs within 3-4 sec., repeated every 15 min., each phase 1,0 MWs for 1000 V DC, resistor value 0,13 Ω ; selected: 6 x S313A – 0,022 with each 165 kWs (Σ 990 kWs) = 0,132 Ω ;

type FEP $3121806 - 3 \times 0.13$, connection on 6 lugs with connection screws M12 at the resistor

Type series FKEY 31..

Technologies

- for high energy absorption capacity
- for high continuous currents
- continuous dissipation up to 19,5 kW
- for integration into switch cabinets
- optional with temperature switch (TS) with fast-on connections 6,3x0,8, type FKEYQ 31..

Each resistor device can be equipped with 2 or more connecting lugs. The connections are made with screws M12 at the mounted connecting lugs. The resistor is mounted by means of two side plates. We achieve a wide range of resistance values and wattage rating by variation of number of steel-grids and resistance values.

Combining of several partial resistors (e.g. 3 phases) in one resistor unit is possible. They are separated by insulation rolls.

You will find suggestions for the dimensioning of the resistor for short time load in chapter "Technical details", please look on page T613E up to T618E.

For customer wiring you should use a heat resistant wire.

Application

Customized solutions like integrating a resistor unit into a switch cabinet, when a very compact design is needed.

Thus various kinds of solutions are possible for many applications such as:

- FRT resistor
- crowbar resistor
- load resistor
- charge-/discharge resistor
- current limiting resistor

1,0 - 19,5 kW, up to 7,8 MWs, for integration, low ohmic values, high energy absorption capacity

Steel-grid fixed resistor block, with side plates, in protection degree IP 00 for high energy absorption capacity, for integration into switch cabinets. Connection directly at the resistor.
